**January 20, 2012
Version 5.0 || Release 5.1**

Special Information

Sizing, Shanks & Solitaires

The different prices listed on the following pages are to:

- A. Size the ring
- B. Check the stones for tightness and if any are loose, we will tighten them and may guarantee their loss for one year from the date of pickup.
- C. Rhodium plate white gold rings after sizing to give them a “Platinum” like coating, thus making the white gold ring whiter and more resemble platinum.
- D. The Tiffany style engagement rings in the last part of the chapter are:
 1. Furnishing the mounting
 2. Setting the stone
 3. Sizing the ring.

The mountings are priced for the medium weight, typical mounting from the vendors catalogues. Pricing was taken for round Tiffanys and fancy shapes were figured at 20% higher because of the fancier heads. The prices are not to assemble a ring but to buy it ready made and our jeweler will set and size it. For the JIrc codes, use the codes as if the customer brought the ring into the store (see chapter 100 and 700).

There are three types of solitaires:

- 1) 14kt shank & head
- 2) 14kt shank & platinum head
- 3) Platinum shank and head.

The prices are devised by how many stones we will check, tighten and possibly guarantee. **If the customer does not want their stones checked, tighten and guaranteed and if they do not want their white gold Rhodium Plated,** then charge the customer the “Yellow Gold Ring” pricing under the “0-4 Stones” column. **Mark The envelope:** “No Guarantee on stones loss, customer did not want to have stones checked and tightened.”

The same would hold true if the customer did not want Rhodium Plating but did want the stones tightened. Just choose the column with “yellow gold, tighten” so many stones. Be sure and mark the envelope “Do not Rhodium Plate.”

The summary of our guarantee is stated in this chapter on page 100-7. Our complete guarantee and warrantee is outlined in chapter 1000, starting with page 36.

Gold prices are based upon \$1500-\$1700 an ounce
Platinum is at \$1500-\$1850 an ounce.
Silver \$40 an ounce || Rhodium \$2130

SAMPLE

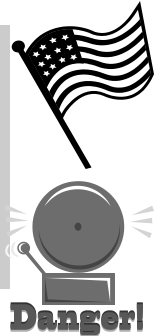

Special Information

Tips and Prongs

Note on Platinum: Diamonds can take the heat of gold repair but *not* platinum repair. The stones must be removed first, unless we can use a laser. You can leave the stones in place if you use 20kt white gold rather than platinum for retipping.

Important! Only 3 stones can take the heat of repair and they are the colors of the American flag:
Red, White & Blue.

Only three stones can take the heat of tip and prong repair:
Faceted Ruby, Diamonds & Blue Sapphire.

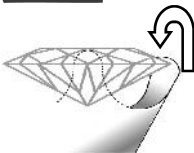

Cabochon stones cannot take heat, tiny bubbles in the stone can expand and break the stone. All other stones must be removed for the repair and reset after the repair is finished. *Many Stones repaired by a Laser will not have to have stones removed.*

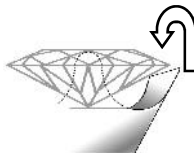

There is an additional charge to remove & reset the stones.

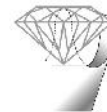

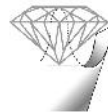

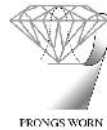

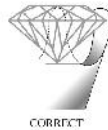

Any stones with heavy inclusions will have to be removed for the safety of the stones.

Needs a TIP

Needs a PRONG

Please Note In Advance: We may selectively decide not to be responsible for any damage or loss of the customers stone(s). This might be due to the poor condition of the customers item, it may not have enough setting(s) to securely hold the stones, or the value of the stone is such that we cannot afford to self-insure ourselves. If in doubt, please ask!

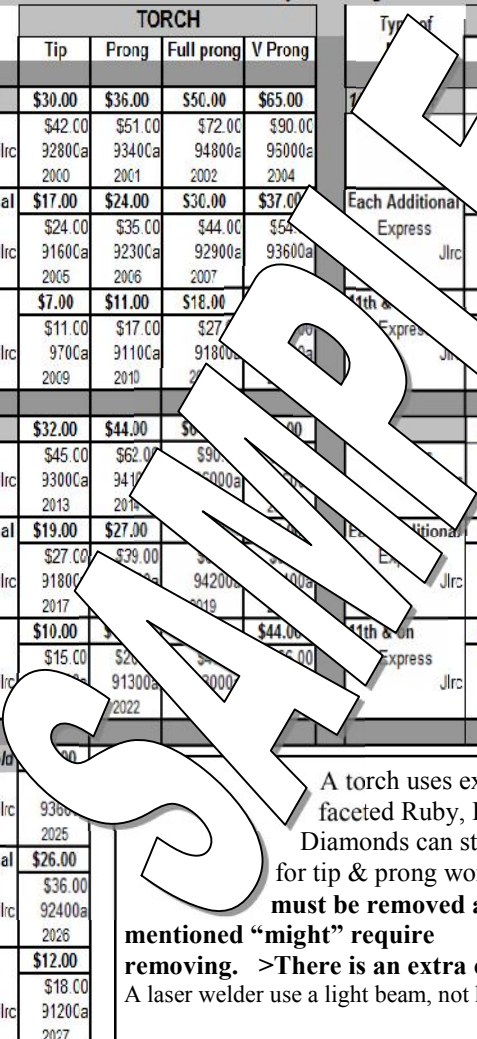

If the stone is out of the mounting, then you must charge for setting in addition to the repair. See Chapter 700

A torch uses extreme heat. Only faceted Ruby, Blue Sapphire and Diamonds can stay in the mounting for tip & prong work. **All other stones must be removed and some stones mentioned "might" require removing.** >There is an extra charge, see 700-6.<
A laser welder use a light beam, not heat and many
